Education

M.S. in Artificial Intelligence, Machine Learning

Northeastern University

Expected May 2028

Seattle, WA

B.A. in Computer Science, Data Science & Economics

B.B.A. in Business Administration, Finance

Gonzaga University | President's Honor List | Data Science TA | *Summa Cum Laude* | GPA: 3.96

May 2026

Spokane, WA

Research & Industry Experience

Cofounder, Business Lead

kapsl

August 2026 – Present

Seattle, WA

- Co-founded a Rust-based AI inference runtime that governs GPU memory dynamically across concurrent models, positioned against static-partitioning approaches (Triton, vLLM) for shared-GPU inference workloads.
- Designed a rigorous benchmarking methodology with statistical validation and tamper-evident provenance tracking, confirming admission-control safety through repeated stress testing with zero crashes or measurable impact on other resident tenants.
- Led go-to-market strategy and investor positioning, pitching at investor networking events.

AI / Machine Learning Engineer – Research Assistant

Institute for Informatics & Applied Technology – Gonzaga University

January 2025 – May 2026

Spokane, WA

- Designed and built the **Wazuh MCP Server**, an open-source Python server (**30+ endpoints**) enabling LLMs to query and analyze security events from a Wazuh SIEM platform through structured tool calls.
- Designed a benchmarking study comparing **skill integration** across frontier models against a ground-truth attack chain, demonstrating that domain knowledge closes the performance gap between smaller and larger models.
- Benchmarked **three LLMs** on **60+ CVE reports** using a three-stage RAG pipeline with specialized agents for retrieval, analysis, and remediation recommendation, focusing on insightfulness and verifiability.
- Developed and delivered a workshop on **RAG systems and LLM evaluation** to **30+ participants**, covering classical metrics, agent-based evaluation, and responsible AI practices.

Data Engineer Intern

KPIM Vietnam

June 2025 – September 2025

Hanoi, Vietnam

- Designed and maintained **10+ data pipelines** using SQL, Python, and Microsoft Fabric for **two Big Data projects**, enforcing schema validation, data quality checks, and optimizations that made querying **50% faster** than the client's internal system.
- Built reusable tooling and documentation to streamline troubleshooting, standardize workflows, and provide reliable, self-service financial and operational data for the client's six hotel properties.

Data Engineer – Innovation Intern

KONE Elevators & Escalators

June 2024 – August 2024

Singapore

- Built a centralized **Customer 360** by integrating **20 years** of data from **five countries**; aligned models to enterprise architecture and recommended schema optimizations to improve consistency and join performance.
- Developed a **Tableau** dashboard using SAP, Salesforce, and Excel data; created models and calculations to monitor customer behavior, service KPIs, and revenue in real time.
- Engineered ETL pipelines on **AWS S3** for ingestion, storage, and validation; automated integrity checks and partitioning to **reduce data retrieval latency by 40%** and improve reliability.

Data Science & Machine Learning Intern

TecAlliance Vietnam

June 2023 – August 2023

Ho Chi Minh City, Vietnam

- Engineered Python algorithms to parse data from **100+ wiring-diagram SVGs**, creating structured datasets for computer vision models (YOLO) and advanced ML pipelines.
- Deployed a **Neo4j graph database** for relationships extracted from automotive schematics, increasing **query speed by 80%** over the client's existing database and enabling deeper insights.
- Led weekly global meetings of nearly **15 team members** to unify data engineering efforts, consolidate findings, and manage timelines across multiple time zones.

Project

Minecraft AI Companion | Applied AI Developer | Senior Capstone

August 2025 – May 2026

- Built an open-source Minecraft mod using a **two-model architecture** (local LLM for real-time dialogue and cloud model for retrieval-augmented queries), designing the context pipeline, tool-calling interface, and content guardrails for safe in-game interactions.

Mortality Risk Simulator | Project Lead

Spring 2025

- Developed a neural-network mortality-risk prediction pipeline using demographic, vitals, and medical-history features to support accurate and fair underwriting review.
